

5 Essential Prerequisites for Building an Internal Developer Platform (IDP)

IDPs are self-service tools that help product teams streamline development processes resulting in quicker time to market.

Consider these **five prerequisites** to ensure your **IDP success**:

1

Define Clear Objectives

Chalk out your main scope to deftly guide your platform's design and development with clarity.

2

Foster Stakeholder Alignment

Ensure alignment with all stakeholders and encourage open communication to understand their needs.

3

Drive the Basics

Cultivate a strong knowledge base within platform teams on critical aspects of software infrastructure, like networking & disaster recovery.

4

Ensure Scalability & Flexibility

Design your IDP so that it can be scaled with ease and ensure that it is reliable, adaptable, and agile.

5

Focus on User-Centric Design

Provide a seamless experience for developers by making the platform intuitive, efficient, and easy to navigate.

By addressing these touchpoints, your organization can lay a solid foundation for a successful internal developer platform.
